- ENVIRONMENT
- ANIMAL
- VIDEOGAMES
- SCOUTING
- DIY
- ARDUINO
- RASPBELLY
- ROBOT

CREATIVE WORKS

[10/07/2021 – Current]   **creation of my own personal websites**

last year i created my own personal website and i collaborated in the creation of a second one by using "Visual Studio Code" my first website is based on a project that i realised during 2021, in order to play videogames. the second website is a project that i created with my school team and is an example of a cinema website

https://prime-guardian.github.io
https://zela2000.github.io/easy-cinema/

[14/04/2022 – Current]   **Digital library of programs in c**

I created a program entirely in c language that includes all the single programs created during the school period, we are now at version 2.0, for this program I wanted to create a folder on the github site to collect user suggestions. The program allows you to test the individual programs and to save the procedures on an external file.
